SUMMARY

Java Backend Developer with 3 plus years of experience building AI-integrated enterprise platforms, scalable microservices, and NLQ-to-SQL pipelines using Java 8, Java 17, Spring Boot, Apache Calcite, and LLM integrations. Deep expertise in multi-database query federation, AST transformation, and ontology-driven data modeling across PostgreSQL, Oracle, BigQuery, Snowflake, Databricks, and Trino. Proficient in integrating MCP-based AI capabilities into client-facing products using Claude and GitHub Copilot as daily agentic development tools to accelerate engineering velocity and product quality.

EXPERIENCE

Software Engineer

AppOrchid India Pvt. Ltd., Hyderabad

April 2026 – Present

Remote / Hybrid

- Designed and delivered a client-facing MCP (Model Context Protocol) server integration connecting the AppOrchid platform to Claude AI, enabling natural language-driven data queries to flow through the Easy Answers NLQ pipeline and return structured analytics results directly within AI assistant conversations.
- Engineered a platform-wide API Key Management system using Spring MVC, Spring Security, and Hibernate – allowing users to generate unique, identity-bound API keys that are persisted as cryptographic hashes, validated on every request against the database, and used to authorize programmatic access to the AppOrchid platform from any external client.
- Implemented the Ontology Inheritance feature enabling parent ontologies to share Metric Subject Objects (MSOs) with child ontologies, supporting cross-database data relationships and reusable metric definitions across enterprise customer tenants – modeled on Java inheritance principles applied at the data modeling layer.
- Mentored junior developers through systematic code reviews, enforced JUnit, Mockito, and SonarQube quality standards, and used GitHub Copilot and Cursor daily to accelerate implementation, debugging, and documentation cycles.

Associate Software Engineer

AppOrchid India Pvt. Ltd., Hyderabad

July 2023 – March 2026

Remote / Hybrid

- Architected the core backend of the Easy Answers AI analytics platform – an NLQ-to-SQL pipeline where LLM-generated queries are intercepted, semantically rewritten using Apache Calcite (AST transformation, dialect-aware type coercion, multi-table join resolution), and dispatched as optimized queries to 10 plus databases including PostgreSQL, MySQL, Oracle, SQL Server, BigQuery, Snowflake, Databricks, Trino, SAP HANA, and DuckDB.
- Built the client-facing query federation feature using Trino connectors, enabling a single Easy Answers query to join data across multiple heterogeneous databases in one request, reducing query response time by 30 percent and expanding the product's cross-database analytics capabilities for enterprise clients.
- Developed and maintained Spring Boot microservices handling Calcite AST rewrites, SQL dialect translations, and ontology-to-table mapping logic, integrating Spring Data JPA and Hibernate for metadata persistence across PostgreSQL and Oracle backends.
- Resolved 30 plus critical production incidents spanning Calcite window function frame violations (NTILE, LEAD, LAG on Databricks), BigQuery DATE versus TIMESTAMP type mismatches, and Trino CTE plus UNION ALL grouping errors through deep root cause analysis, reducing customer-reported defects by 40 percent.
- Built secure RESTful APIs using Spring Security for product feature endpoints and wrote comprehensive JUnit and Mockito tests to maintain high code coverage and reliability across frequent releases.

PROJECTS

ListMyNest – Full Stack Real Estate Platform

Spring Boot, Java 17, PostgreSQL, Redis, Docker, JWT Auth, Firebase FCM, Next.js 14

2024 – Present

- Built end-to-end using Cursor as the primary AI-powered IDE with Claude Code and GitHub Copilot driving backend architecture, REST API design, schema decisions, and debugging – a hands-on demonstration of agentic AI-assisted full stack engineering.

- Implemented OTP-based JWT authentication, role-based access control, Firebase Cloud Messaging push notifications, and WhatsApp API integration; containerized with Docker, schema migrations via Flyway, deployed to production on Vercel with Git-based CI/CD.

TECHNICAL SKILLS

Languages: Java 8, Java 17, SQL, Python (fundamentals)

Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, JPA, Java EE, JDBC

AI and LLM Integration: Apache Calcite (AST transformation, SQL rewriting, dialect translation), MCP (Model Context Protocol), NLQ-to-SQL pipelines, LLM-integrated query processing, Claude API, Prompt Engineering (basic)

APIs and Architecture: RESTful API Design, Microservices Architecture, Distributed Systems, Query Federation, Ontology-driven Data Modeling, OOP, Design Patterns, SOLID Principles, DSA

Databases – SQL: PostgreSQL, MySQL, Oracle Database, SQL Server – schema design, indexing, query optimization

Databases – Analytical and NoSQL: BigQuery, Snowflake, Databricks, Trino, SAP HANA, DuckDB, Redis

Testing and Quality: JUnit, Mockito, Unit Testing, Integration Testing, Test-Driven Development, SonarQube, Code Review

DevOps and CI/CD: Git, GitHub, Maven, Gradle, Docker, CI/CD Pipelines, Linux, JIRA, AWS EC2 (basics)

Agentic AI and Developer Tools: GitHub Copilot (daily), Cursor AI IDE (daily), Claude Code by Anthropic (hands-on), ChatGPT

Methodologies: Agile, Scrum, SDLC, Root Cause Analysis, Technical Mentorship

EDUCATION

Bachelor of Engineering – Computer Science and Engineering

Sapthagiri College of Engineering, Bengaluru

2019 – 2023

CGPA: 8.0
